GHSIX NAV	6.55%	6.55%	33.39%	3.93%	6.40%	3.52%
BENCHMARK**	5.22%	5.22%	58.21%	12.33%	13.73%	9.92%

\* GHSAX and GHSCX inception is August 31, 2015. GHSIX inception is May 16, 2014. Inception for the benchmark is calculated from May 16, 2014. Effective September 20, 2016, this fund changed its investment strategy and name. Performance prior to this date reflects the previous investment strategy. Performance thereafter reflects the new investment process.

The maximum sales charge (load) for GHSAX is 5.75%. The performance data quoted here represents past performance. For more current performance information to the most recent month-end, please call toll-free 877-270-2848 or visit our website, [www.ghf-funds.com](http://www.ghf-funds.com). Current performance may be lower or higher than the performance data quoted above. Past performance is no guarantee of future results. The investment return and principal value of an investment in the Fund will fluctuate so that investors' shares, when redeemed, may be worth more or less than their original cost. The Class A, C, and I share total annual operating expenses are 1.96%, 2.71%, and 1.71%. Please review the Fund's prospectus for more information regarding the Fund's fees and expenses.

\*\*Effective February 1, 2020, the Fund has selected the S&P Global BMI TR Index to replace the S&P 500 TR Index as its primary benchmark. The S&P Global BMI TR Index is a global equity index, which more closely represents the broad markets in which the Fund invests.

## INVESTMENT PHILOSOPHY

The underlying premise of the Fund is that blending tactical strategies together can reduce the volatility of the overall investment. Our research shows that tactical investment strategies are less correlated to traditional, strategic investment benchmarks; and they are less correlated to one another.

We believe these strategies can be beneficial over a market cycle; blending them together may reduce the volatility, relative to any single strategy. Tactical strategies are investments which can hold exposure to a target asset class risk, but can also move away from that asset class risk under certain circumstances.

## INVESTMENT APPROACH

- Seeks to generate return from capital appreciation and income
- Seeks to carry exposure during more favorable risk conditions, and to allocate defensively under less favorable conditions by tactically adjusting the Fund's equity exposure
- Invests across US and international equity markets, and US sectors, or bonds or cash
- Broad market exposure, across market caps or sectors utilizing liquid ETFs
- Designed to potentially reduce the volatility of any single strategy through a selection of strategy combinations by the Adviser

## GROWTH OF A \$1,000 INVESTMENT (NET OF FEES) <sup>1, 2, 3</sup>

## QUARTERLY RETURNS (NET OF FEES) <sup>1, 2, 3</sup>

**There is no guarantee that any investment will achieve its objectives. Data quoted is past performance and current performance may be lower or higher. Past performance is no guarantee of future results. Investment return and principal value of an investment will fluctuate, and shares, when redeemed, may be worth more or less than their original cost.**

## DISCLOSURES

**Investors should carefully consider the investment objectives, risks, charges and expenses of the Good Harbor Tactical Select Fund. This and other important information about the Fund is contained in the prospectus, which can be obtained at [www.ghf-funds.com](http://www.ghf-funds.com) or by calling 877-270-2848. The prospectus should be read carefully before investing. The Good Harbor Tactical Select Fund is distributed by Northern Lights Distributors, LLC, member FINRA/SIPC. Good Harbor Financial, LLC is not affiliated with Northern Lights Distributors, LLC.**

### Performance and Risk Measures:

Effective September 20, 2016, this fund changed its investment strategy and name. Performance prior to this date reflects the previous investment strategy. The information herein reflects the new investment process.

- 1) Performance at net asset value ("NAV") does not include the effect of sales charges. Class A share performance, including sales charges, reflects the maximum applicable front-end sales load of 5.75%.
- 2) The S&P Global BMI Index is a float-adjusted market cap weighted, comprehensive, rules-based index that employs a transparent and consistent methodology across all countries and includes more than 11,000 stocks from 25 developed and 25 emerging markets. Investments cannot be made in an index. The data shown does not reflect or compare features of an actual investment, such as its objectives, costs and expenses, liquidity, safety, guarantees or insurance, fluctuation of principal or return, or tax features.
- 3) Performance results include the effect of expense reduction arrangements for some or all of the periods shown. If those arrangements had not been in place, the performance results for those periods would have been lower.
- 4) Information is subject to change and is not intended to represent any past or future investment recommendations. Allocations are as of the end of each month.
- 5) Standard Deviation, Alpha, Beta, R-Squared, Correlation, Sortino Ratio, Sharpe Ratio, Upside Capture, Downside Capture, are since inception of GHSIX.

### Glossary of Terms:

Alpha - a measure of actual returns and expected performance, given a level of risk (as measured by beta).

Beta - a measure of the volatility, or systematic risk, of the composite portfolio in comparison to the market as a whole.

Correlation - a statistical measure of how two securities move in relation to each other.

R-squared - a measure which indicates how much of the Fund's fluctuations are attributable to movements of its benchmark.

Sharpe ratio - a measure of risk-adjusted performance.

Sortino ratio - a measure of the differentiation of upwards and downwards volatility providing a risk-adjusted measure of performance without penalizing for upward price changes.

Standard deviation - a measure of the dispersion of returns; a large dispersion shows higher volatility.

Upside/downside capture ratio - a measure of whether an investment has outperformed, or lost less than, the market benchmark during periods of market ups and downs.

### Risk Factors:

Mutual fund investing involves risks including the possible loss of principal.

ETFs, ETNs and mutual funds are subject to investment advisory and other expenses, which will be indirectly paid by the Fund. ETFs, ETNs and mutual funds are subject to issuer, fixed-income and risks specific to the fund. As a non-diversified fund, the Fund may invest more than 5% of its total assets in the securities of one or more issuers. A higher portfolio turnover will result in higher transactional and brokerage costs and may result in higher taxes.

Leveraged ETFs and borrowing magnify the potential for loss and expose the Fund to interest expenses on money borrowed. The Fund may invest in derivatives, including futures. Leveraged ETFs and derivatives will amplify losses because they are designed to produce returns that are a multiple of the equity index to which they are linked. Derivative instruments may be illiquid, difficult to value and leveraged so that small changes may produce disproportionate losses. Losses may result from a lack of correlation between the value of the leveraged ETFs and derivatives and the value of the underlying asset or index.

Foreign investing involves risks not typically associated with US investments, including adverse fluctuations in foreign currency values, adverse political, social and economic developments, less liquidity, greater volatility, less developed or less efficient trading markets, political instability and differing auditing and legal standards. These risks can be greater when investing in emerging markets.

The Fund may invest in fixed income securities, including US Government securities which are subject to changing financial and interest rate conditions. Issuers may not make principal payments resulting in losses to the Fund. Market conditions could cause these securities to fall in tandem, creating correlation risk.
